

***Please read, take action and forward this e-mail to friends and neighbors***

Eastside communities are at the point of being committed to an inferior drinking water supply from Lake Tapps, a recreational lake surrounded by 2,000 homes many on septic systems.

Many citizens are unaware that our current pristine water supply will forever be substituted by an inferior supply exposed to human influences including septic systems. The long term combined effects to humans from drinking such water day after day are unknown.

The City of Seattle has refused to allow this water into their water transmission lines.

There exist a window of opportunity to prevent this from happening. The Department of Ecology is soliciting public input on the use of Lake Tapps as a source of drinking water. The cost of this proposed Public Water Supply (PWS) is \$780 million in today's dollars.

Your involvement is **critical** to ensure that that we retain the existing clean, high quality, and affordable water supply for current and future generations. Please sign, circulate the attached petition letter and mail to the Department of Ecology. Alternatively you may provide comments/suggestions on line through the DOE web site given below. It is important that you alert and inform your neighbors to participate in this issue. Without your action the promoters of a Lake Tapps water supply will succeed and we will be the unfortunate victims.

Deadline for responses to Department of Ecology: ***November 27<sup>th</sup> 2006.***

# ***Lake Tapps, Public Water Supply (PWS) project, comments/suggestions before final decision.***

The undersigned are **opposed** to the use of **Lake Tapps** as a **source of drinking water** for the Eastside. This recreational lake is surrounded by over 2,000 homes many on septic systems. State of the art filtration cannot adequately remove excreted pharmaceutical drugs such as prosac, viagra, birth control, clofibric acid, beta-blockers, antibiotics, analgesics and antiseptics. The existing clean water supplies from the Cedar and Tolt rivers are still available and affordable. This proposed PWS will be **detrimental to the public welfare and interest** and should be **rejected**.

# ***Lake Tapps, Public Water Supply (PWS) project, comments/suggestions before final decision.***

The undersigned are **opposed** to the use of **Lake Tapps** as a **source of drinking water** for the Eastside. This recreational lake is surrounded by over 2,000 homes many on septic systems. State of the art filtration cannot adequately remove excreted pharmaceutical drugs such as prosac, viagra, birth control, clofibrilic acid, beta-blockers, antibiotics, analgesics and antiseptics. The existing clean water supplies from the Cedar and Tolt rivers are still available and affordable. This proposed PWS will be **detrimental to the public welfare and interest** and should be **rejected**.
